PFJ DISLOCATION ADVICE SHEET

- Wear a bandage to assist in controlling the swelling.

- For the first 2-3 days, ice the knee for 20 mins every few hours and elevate as much as possible.

- You need to wear a splint to keep your knee straight for at least two weeks to allow injured structures to heal.

  - You can remove it to wash, but keep your knee straight

- With the splint off, practice lifting your whole leg up while keeping your knee straight.

  - Repeat 10 times every few hours until it is easy to do
