DISLOCATED SHOULDER ADVICE SHEET

• Wear a sling for the first few days or until pain settles without (if you are finding yourself cradling your arm, you probably still need a sling).

• For the first 2-3 days, ice the shoulder for 20 mins every few hours.

• To prevent re-injury:
  o Keep your elbow close to your body for the first week or two
  o For six weeks
    1. Avoid putting hand behind back, or behind head
    2. Avoid heavy lifting with that arm

• Exercises - tuck elbow into side and hold
  o Resist pushing your arm:
    1. Outwards against resistance (hold for 5 seconds, repeat 10 times each)
    2. Inwards against resistance

DISLOCATED SHOULDER ADVICE SHEET

- Make an appointment to see a physiotherapist at two weeks to commence strengthening exercises.

- It takes roughly six weeks for the ligaments around the shoulder to tighten up again after a dislocation, so sports and vigorous activities involving the arms or where there is potential to fall over should be avoided completely within this period.

- If you have nerve damage and your shoulder muscles are not working properly, it may take a bit longer to get back full function in the shoulder.

- Generally if you have had 3 dislocations in the past, you usually need surgery to stabilise the shoulder.
